PROFILE

BSc(Hons) Computer Systems Engineering graduate with hands-on experience in IT support, systems troubleshooting, networking, software development, and basic security practices. Skilled in diagnosing hardware and software issues, supporting end users, configuring and maintaining Windows and Linux systems, managing networks, and developing web-based applications. Familiar with cloud-based tools, automation using Python, API integrations, and secure system deployment. Motivated to contribute in IT Support, Help Desk, Junior Software Development, Junior DevOps, or Cybersecurity-focused roles where system reliability, security, and performance are critical.

EDUCATION

Bachelor of Computer Systems Engineering

Botswana Accountancy College/University of Sunderland 2021 – 2025

CERTIFICATIONS

- Cisco Networking Academy CCNAv7: Introduction to Networking
- BSc (Hons) Computer Systems Engineering 2nd class degree

CORE TECHNICAL SKILLS

Systems & Troubleshooting

- Hardware & software diagnostics
- OS installation & configuration (Windows/Linux)
- System maintenance & performance monitoring
- Basic server administration
- User support & fault resolution

Networking (CCNAv7 Certified)

- LAN/WAN fundamentals
- IP configuration & subnetting
- Routing & switching basics
- Network security best practices
- WiFi configuration & troubleshooting

Software & Databases

- SQL, PostgreSQL, MongoDB
- Python for automation & data handling
- JavaScript, Node.js, Express.js
- React.js / Next.js web systems
- API integrations & system interfaces

CORE COMPETENCIES

- Problem Solving & Analytical Thinking
- Customer Orientation & Stakeholder Engagement
- Creativity & Innovative Thinking
- Business Planning & Product Understanding
- Attention to Detail & Quality Management
- Initiative, Drive & Results Orientation
- Team Collaboration & Communication

ACADEMIC & PRACTICAL EXPERIENCE

Technology & Systems Projects (Academic / Personal)

- Supported development and analysis of system solutions aligned with user and business requirements
- Worked with system documentation, workflows, and data to support functional outcomes
- Applied networking and system knowledge to troubleshoot technical issues
- Assisted in evaluating solutions to improve usability and efficiency

WORK EXPERIENCE

Business Development Officer – Morox Properties

Feb – Present (2026)

- Develop and implement AI algorithms and models to improve systems performance and user experience
- Collaborated with cross-functional teams to identify and address AI-related challenges and opportunities
- Leading web and system developments to improve work effectiveness and user experience
- Creating and maintaining documentations for AI systems including performance metrics, processes and data models.
- Lead web optimizations for company website, ensuring better performance, SEO and user experience.
- Introduced internal database and secure cloud services for systems and software's developed.
- Projects took part in:
 - Company Website (Morox Properties Web)
 - Took part in optimizations, CRUD updates and content updates on company website.
 - Ensured access to company website (code) internally with the use of newly added Github environment.
 - TKM Fleet Log System
 - Developed a comprehensive internal fleet management system for managing vehicle bookings, trip requests, and fleet operations.
 - Tech stack included:
 - Next.js
 - Node.js
 - PostgreSQL
 - JWT for authentication
 - Docker
 - Ticketing Platform (REA RORISA)
 - Developed a ticketing system for the REA RORISA VOL 1 event, where people can purchase tickets and submit reservations for the event.
 - Tech stack included:
 - React
 - Node.js

- Vite
 - Express.js
 - JWT for authentication
 - PostgreSQL
 - Typescript
 - Resend for emails
 - TailwindCSS
- Ticketing system consisted of a custom form for users to fill up when submitting reservations, a confirmation page of the submitted reservation along with payment instructions, an admin panel where admin is able to manage reservation (making approvals, viewing tickets, etc.
- For efficient responses, an automated functionality was implemented. Automated emails were sent to users upon submitting reservation and when admin has approved to reservations.
- Tickets containing ticket code, custom QR code, name of event and venue, were shared to buyers, of which were presented at the entrance of the event. Admin would use the ticketing system to scan QR code or enter ticket code to check in users.
- WhatsApp Integration (Kagiso)
 - Regulated development of the WhatsApp integration project, an automated real estate chatbot called Kagiso.
 - Oversaw project development, ensuring that developed product is in alignment to company needs, in accordance to set timeline and that the end-product was fully functional for public use.
 - The WhatsApp chatbot consists of the following features:
 - Automated responses between bot and users for 24hrs.
 - Bot is able to handover conversations to real agents whenever clients want human interaction or seeks further assistance for services such as Property Valuations, Property Management, Real Estate Agency, and Consultancy.
 - Recommending properties to users based of the property features, location and budget they have in place.
 - Challenges faced:
 - Because we had no direct access to database, we were unable to connect bot directly to database containing all property listings. This restricted the chatbot from being able to provide property images to users via WhatsApp.

- To resolve challenge faced with database, I introduced staged environment where property descriptions and relevant information can be scrapped.

Software Developer – Africa Code Academy June – November (2025)

- Developed web-based system handling structured user data.
- Expanded my tech stack with the use of Next.js, Express.js and Tailwind.
- Took part in the Glamlink project and developed web app and WhatsApp chatbot, implemented secure deployments with Docker and Git-based workflow.
- Processed backend data securely and optimized system performance.
- Maintained secure communication channels with APIs and cloud systems.

IT Support & Web Developer – Swahiba
Jan – June (2024)

- Troubleshoot application and network issues across multi-service systems.
- Ran email migrations for users
- Distributed and managed Microsoft 365 licenses for supported users
- Developed company website using WordPress and deployed via CPanel
- Took part in a mobile application development project, Combo App, using React Native
- Analysed system logs and monitored performance issues.

INTEREST AREAS

- Enterprise Products & Services
- Customer Experience Management
- Telecommunications & Digital Transformation
- Business-Technology Alignment
